

Human Skull Anatomy Activity

Our brain is one of the most important organs in the human body. It needs special protection...your skull! It's made up of the cranium (8 bones that surround your brain) and another 14 bones in the face which make up your entire skull.

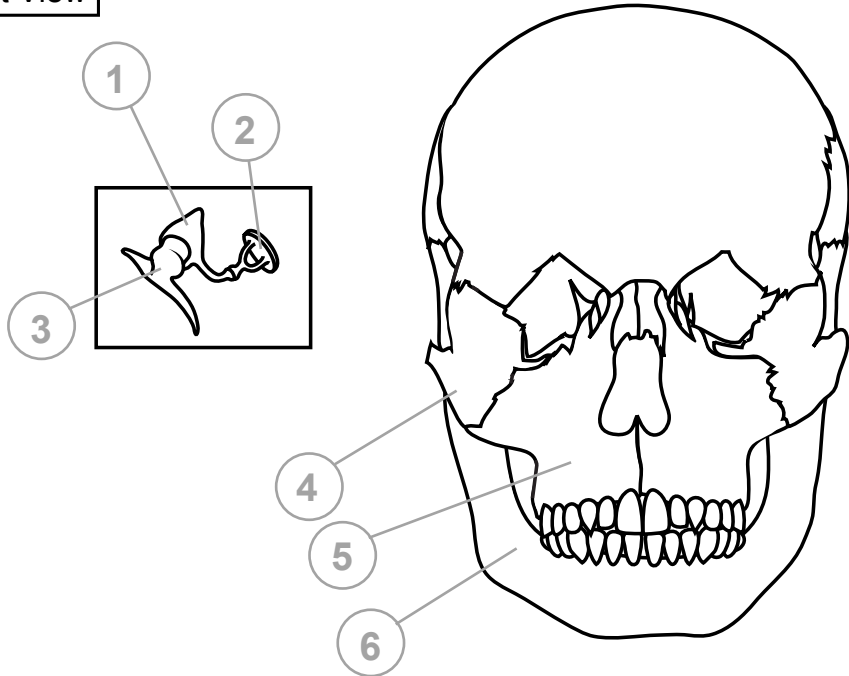

In this worksheet, we are going to review some of the major bones that protect and surround your brain. The parts of the skull have been labeled. Your challenge is to write the correct name for each part.

If you want to have more fun learning about bones, try our Bone Lab. You can use our interactive tools and games to learn about the human skeleton and our busy bones.
